6. Consistency with other Plans........................................21

ACKNOWLEDGEMENTS
This Plan was prepared by Jocelyn Ayer, NHCOG’s Community & Economic Development Director. Thanks to all of the residents and land use commission members who provided their perspectives and input during the process of developing this Plan. Thanks to all our partners for their willingness to help us implement it!

Front Cover: View of Mudge Pond (Sharon, CT) photo by Joanna Wozniak-Brown
There are thousands of actions we could take to address these issues. The purpose of this Regional Plan of Conservation and Development is to lay out a prioritized, strategic list of actions that we can take together as a region to meet our land use goals over the next 10 years.

To reach our goals we will need to work together and we will need to use our resources strategically. To do this we will ask each of our key partners to endorse the goals and actions proposed in this plan and to commit to working together to implement the plan.

Our key partners include:

21 member municipalities

Housatonic Heritage

Housatonic Valley Association

NWCT Arts Council

NWCT Economic Development Corporation

NWCT Chamber

NWCT Transit District

Northwest Conservation District

Partners for Sustainable Healthy Communities

“How can we attract and retain young people and young families to our 21-town region?”

“How can we continue and further improve upon the high quality of life we offer to residents of all ages?”

“How do we balance our need to conserve land, protect water quality, and maintain the rural character of our region while also meeting our needs for housing and jobs?”

Purpose & Partners
Input

Here is how we determined the land use goals this plan would focus on and prioritized actions to help us meet these goals:

**Analyzed Data and Trends**
In October 2016 we released the *Northwest Hills Regional Profile* which provides demographic, housing, and economic conditions and trends for each of our 21 towns and for the region.

**Collected Input on Regional Goals**
- We conducted a web-based resident input survey and collected 1,382 responses from residents in our 21 towns.
- We visited and surveyed each of our member towns’ Planning & Zoning Commissions.
- We collected survey responses from 586 high school students.

**Conducted Focus Group Sessions on Action Steps**
Six focus group sessions were held with regional partner agencies, experts in the field, and our town’s land use commission members. The purpose of these sessions was to identify actions the COG could take or assist its member towns to take to address core issues.

Implementation

How will we use this plan to meet our regional land use goals?

1) This plan will be used to guide the NHCOG’s [workplan](#) and policy positions along with NHCOG’s other regional plans including the Regional Transportation Plan.

2) We will hold an annual forum with our partners to check in on our progress, celebrate our successes, and update our priority actions for the coming year.

3) We will develop a web-based tool kit to assist our municipalities in implementing actions in the Plan, including case studies and example regulations.

4) We will create a [checklist for municipalities](#) to use when updating their local plan of conservation and development.
Trends Shaping the Region

Here are some of the key trends shaping land use in the region. These are more fully detailed in the Northwest Hills Regional Profile available on our website.

Population and demographic trends:
- Our region is losing population. Between 2010 and 2015 we saw a net loss of almost 3,500 residents (3% of our region’s total population).
- In the next ten years, the region will see a larger percentage of its population hit retirement age (from 18.2% of the population in 2014 to 28.0% in 2025) and a smaller percentage will be school-aged children (from 20.1% to 17.5%).
- The seasonal or part-time population is estimated at 13% regionally but is as high as 50% in a few towns.

Economic trends:
- There was a decrease in the size of the labor force in the region from 2010 to 2014. Torrington remains the region’s employment center, just as it is the population center.
- The Health Care and Social Assistance industry is one of the cores of the region’s employment, with over 18.0% of jobs. Government and Manufacturing are also important to the region’s industry base.
- Over half the businesses in the region are very small (with 4 or fewer employees), and over 15% of the region’s workforce is self-employed.
- Over 60% of residents commute to jobs outside the region.

Housing trends:
- The region has a higher vacancy rate (17%) than the state (9%). Many of the vacant units are “vacant for seasonal, recreational, or occasional use”, otherwise known as second homes.
- Household size has decreased slightly in the region from 2.5 people per household in 2000 to 2.4 people per household in 2014. Smaller household sizes mean more housing units are needed to serve the same total number of residents in the region.
- Renters represented 33% of occupied units in the state but only 24% of occupied units in the region. With less rental properties available in the region, young workers may seek housing elsewhere.
- Over one-third of the region’s households spend more than 30% of their income on housing costs (16,912 households). Spending more than 30% of your household income on housing costs is considered unaffordable.
The following conservation and development goals will guide the Northwest Hills Council of Government’s planning and policy work over the next ten years:

1. **Attract and retain young residents**
2. **Protect water quality and natural resources**
3. **Support farm businesses and protect farmland**
4. **Strengthen our town centers and Main Streets**
5. **Meet the needs of our older adult residents**
6. **Continue to foster regional collaboration and resource sharing**

Surveyed Resident Perspectives

72% of respondents agreed that the region should place a priority on programs and services to attract and retain young adults and young families. 2/3 of respondents would like to see their town and the region invest in protecting water quality in our lakes, streams, and rivers.
Our region is losing population. Between 2010 and 2015 we saw a net loss of almost 3,500 residents (3% of our region’s total population). When asked what should be our region’s highest priority goals, attracting and retaining young adults and young families received the most votes from respondents to the Regional Plan survey.

POLICIES:

- Facilitate the creation of job, housing, and transportation options desired by young residents.
- Highlight the region’s outdoor recreation assets and amenities/assistance for small business start-ups.
- Create opportunities for robust civic engagement of young residents.
- Develop an on-going program to communicate these opportunities and assets to young people using social media, town and regional websites, and other direct marketing tools.

### Surveyed High School Student Perspectives

Over **1/3** of respondents reported that they would like to live in town centers or downtowns where they could walk to shops, restaurants, library, café, etc. **44%** of respondents reported that they would be more likely to stay in the region if there were more jobs that they would be interested in.
Protecting our region’s drinking water, wildlife habitats, prime farmland, lakes and rivers is critically important both to our current residents and to attracting new residents. Sixty-two percent of Regional Plan survey respondents said they would like to see their town and the 21-town region invest in protecting water quality and deal with invasive species in our lakes, streams, and rivers.

Our region contains some of the most intact habitats in the State. As our region sees an increase in extreme weather events such as storms and flooding, we will assist our towns to identify vulnerabilities and address them.

POLICIES:

- Protect water quality, recreational use, and wildlife habitat of our lakes, rivers, and streams and address issues caused by invasive species, cyanobacteria, and clear cutting of lakefronts/river banks.
- Protect intact forest systems, and public drinking water resource areas from inappropriate development.
- Support the efforts of water protection organizations such as the Farmington River Coordinating Committee, Farmington River Watershed Association, Housatonic River Commission, Housatonic Valley Association, Northwest Conservation District, Shepaug Bantam River Commission, Connecticut Federation of Lakes, Rivers Alliance of CT, State Department of Energy and Environmental Protection (DEEP), and water companies as they seek to improve or maintain water quality in the region.
- Support local non-profit preservation organizations such as Lake Waramaug Task Force, Bantam Lake Protective Association, Tyler Lake Protective, Friends of Westside Pond, Highland Lake Watershed Association, and others whose mission is the preservation of the environmental and recreational value of our lakes and their watersheds.
- Conserve our region’s wildlife, biodiversity, and endangered/threatened species through protection of critical habitat areas.
- Support local land trusts in their efforts to protect sizeable areas of contiguous forest habitat, prime farmland, diverse wildlife habitats, and other environmentally sensitive areas.
- Assist the region’s municipalities with identifying and addressing the potential impacts of increased temperatures, storm events, flooding and habitat degradation to increase local and regional resiliency.
## WATER QUALITY

1. Continue NHCOG’s Household Hazardous Waste Collection Days, including educational efforts to use less toxic materials.
2. Work with the region’s towns to implement Low Impact Development (LID) or other stormwater management regulations, prevent clear cutting of trees along lakefronts and riverbanks and maintain appropriate vegetated buffer areas.
3. Work with the region’s towns, water protection organizations, and local lake/watershed preservation non-profits to a) better understand and control sources of nutrients (e.g., phosphorous) and other pollutants that negatively impact our lakes, rivers, and streams and b) to develop sources of funding and programs to support education, enforcement, and remediation programs designed to address the growing issues of invasive species and cyanobacteria.

### PARTNERS
Northwest Conservation District, municipalities, local, regional, and state water protection organizations listed in policy section above.

## NATURAL RESOURCES AND CRITICAL HABITATS

1. Increase awareness of the mapping tools available to municipal land use commissions that can assist them in identifying and mitigating potential adverse impacts of proposed development in environmentally sensitive and critical habitat areas.
2. Support the mapping of areas of highest conservation need locally in partnership with local land trusts and municipal land use commissions.
3. Provide training opportunities to wetland commission members and work with municipalities to incentivize participation.
4. Assist municipalities with access to education and resources for eradication of roadside invasives.

### PARTNERS
UConn Center for Land Use Education and Research (CLEAR) – Environmental Conditions Online (ECO), Litchfield Hills Greenprint Collaborative

## ENERGY (efficiency, conservation, renewable)

1. Provide regional support to local energy task forces by sharing new information and resources, gathering baseline energy usage data, assisting with public information campaigns, and assisting communities with accessing funding for energy initiatives.
2. Assist our municipalities with participating in SustainableCT, a voluntary, sustainable community certification program that includes a menu of voluntary actions to make communities healthy, safe, resilient, efficient, and livable.
3. Consider establishing a regional, shared sustainability manager to assist in carrying out the tasks listed here.
4. Provide example regulations that remove barriers to alternative energy and highlight relevant case studies.
5. Direct mid and large scale commercial solar installations away from farm fields and core forests and toward brownfields and industrial sites.

### PARTNERS
SustainableCT, Institute for Sustainable Energy (Eastern CT State Univ.), Clean Water Action Connecticut, CT Green Bank

## CLIMATE ADAPTATION

1. Assist towns with conducting a town-wide vulnerability assessment to identify vulnerabilities and prioritize actions.
2. Prepare a climate change adaptation plan including a web-based toolkit.
3. Assist towns with incorporating climate change and resiliency strategies into their POCDs and Natural Hazard Mitigation Plans.
4. Identify vulnerable populations for heat and extreme weather events; assist social and emergency services in creating a vulnerable populations network, and create a web-based map of cooling centers/emergency shelters.
5. Coordinate through Road Supervisors, HVA, and CIRCA to make bridges and culverts ready for larger storm events.
6. Coordinate with FEMA/USGS to update RISK Flood maps.

### PARTNERS
Municipalities, CIRCA, HVA, FEMA
Northwest Connecticut has a rich agricultural heritage. Our region’s landscape is defined by farm fields surrounding our historic town centers. There is growing interest from residents in eating locally grown food, farm-to-table restaurants, and farmers’ markets. There is a growing interest from farmers in bringing customers to the farm, on-farm processing and sales, smaller acreage farming, and cultivating year-round markets for farm products.

**POLICIES:**

- The region should protect farmland, support farmers, connect farms to local markets, cultivate agri-tourism, and ensure access to locally grown food.
- Support agricultural innovation. Promote the region as a center for the development of new agricultural technologies and attract a new generation of farmers to the region.
- Protect the cultural, historic, scenic, and ecological values of farm fields and farmsteads.

<tr>
<td>1) Support local efforts to identify and protect prime farmland. Support applications for funding to acquire or purchase development rights on priority farmlands.</td>
<td></td>
</tr>
<tr>
<td>2) Collaborate with local land trusts and municipalities to provide access to land for new farmers and assist with succession planning for farmers who’d like to retire.</td>
<td></td>
</tr>
<tr>
<td><strong>SUPPORT FARM BUSINESSES</strong></td>
<td>Partners for Sustainable Healthy Communities, Upper Housatonic Valley National Heritage Area, CT Northeast Organic Farming Association</td>
</tr>
<tr>
<td>1) Provide and promote example “farm friendly” zoning regulations which better define agriculture, provide farmers flexibility for ancillary uses on farms, and allow on-farm sales, adequate signage to farms, and appropriate, small scaled meat processing.</td>
<td></td>
</tr>
<tr>
<td>2) Support the Northwest Connecticut Food Hub project which supports farmers by connecting them with larger and more consistent wholesale and niche markets for their farm products.</td>
<td></td>
</tr>
<tr>
<td>3) Provide information to towns on targeted tax relief mechanisms for farmers.</td>
<td></td>
</tr>
<tr>
<td>4) Support local agricultural commissions in their efforts to assess the needs of local farmers, link new farmers to land, create “Know your farmer” brochures and events, consider pursuing zoning changes or right to farm ordinances. Consider forming a Regional Agricultural Commission.</td>
<td></td>
</tr>
</tbody>
</table>
Our village centers, downtowns, and “Main Streets” provide essential services to our residents and help create each town’s unique identity and sense of place. They are the heart of our communities. They also contain many small businesses and attract visitors which support other local businesses. Many visitors have loved our towns so much they have become residents. Retaining the vitality of our town centers is critical and requires sustained, coordinated efforts.

**POLICIES:**

- Promote additional housing development in town centers to enhance the vitality of these centers including re-development of existing buildings, housing above commercial spaces, infill development, and new development on small lots.
- Support tourism marketing activities that draw visitors to our 21-town region.
- Foster and support ongoing activities on Main Streets that attract young visitors and residents to our downtowns and village center areas.
- Make town center areas more pedestrian friendly.
- Promote and enhance each town’s historic, cultural, arts, and recreational assets.
- Limit commercial development of areas outside of town centers (not including home-based businesses).
- Facilitate local place-making initiatives including coordinated, on-going activities on “Main Streets”, activating public spaces, increasing the town center’s attractiveness and uniqueness.
- Link our town centers with our outdoor recreational assets.

By the year 2025, it is predicted that 28% of our region’s population will be over 65 years old. According to a recent AARP study, a majority of older residents want to “age in place”. We need to make sure our communities meet the unique housing, transportation, recreation, civic engagement, health and safety needs of these residents.

POLICIES:

- Improve access to employment and volunteer opportunities for older adults.
- Promote housing that enables people to live safely, comfortably and independently for as long as possible. The vast majority of people 50-plus want to stay in their homes and communities for as long as possible.
- Improve transportation options for older adults to access medical appointment, shopping, and social and civic activities.
- Encourage town recreational events and activities that attract people of all ages- young, old, and in between.

GOAL 5: MEET THE NEEDS OF OUR OLDER RESIDENTS

<td></td>
</tr>
<tr>
<td>2) Increase access to healthy local food by improving access to farmers markets, food shares, and community gardens.</td>
<td></td>
</tr>
<tr>
<td>3) Support local volunteer emergency services by annually recognizing their importance to the community. Consider providing additional incentives.</td>
<td></td>
</tr>
</tbody>
</table>

**Surveyed Resident Perspectives**

*More than* 1/3 of respondents would like to use **sidewalks and pedestrian trails** within their town more than they can now.

55% of respondents thought that their town needs **more housing options** that allow older adults to “**downsize**”.
Eighty-five percent (85%) of regional plan survey respondents agreed that the region should foster collaboration and coordination between and among its town leaders, town board and commissions, non-profit and community based organizations in order to meet regional goals. NHCOG works to do this every day. We are fortunate to have terrific partners in our member towns’ chief elected officials, local board and commission members that value and actively participate in regional collaboration and resource sharing. Our region’s non-profits and community based organizations, often faced with limited resources, have a similar history of partnering to share information and resources.

**GOAL 6: CONTINUE TO FOSTER REGIONAL COLLABORATION, RESOURCE AND INFORMATION SHARING**

Intended Use
The maps on the following pages are regional policy maps. They will be used to assist NHCOG in determining consistency of local or regional actions with the Regional Plan of Conservation and Development when such a determination is requested. As such the maps can be considered advisory in nature to municipalities when they update their municipal plans of conservation and development and/or consider local land use decisions.

Conservation Policy Maps
The “Water Resources” map shows drinking water watersheds, riparian buffers (100ft buffers from banks of significant streams) and wetland soils. Actions that occur in these areas should consider any negative impacts of the action on water resources and reduce or eliminate that impact.

The “Farms and Forests” map includes “Core forest” which shows contiguous forest habitats greater than 200 acres in size. These large contiguous forests provide many regional benefits including providing wildlife habitat, carbon storage, nutrient cycling, and water and air purification. The “priority farm fields” shows farmland greater than 50 acres containing prime farmland soils. It is important to protect these areas from development so that the land remains available for agricultural use to ensure local availability of fresh farm products and help agriculture to remain an important part of the region’s economy. Actions that occur in these areas should consider any negative impacts of the action on core forests and prime farmland soils and reduce or eliminate that impact. Investments in conservation of these areas would be consistent with the Regional Plan.

Sustainable Growth Policy Map
This map shows the areas in our region that are prioritized for actions and/or investments in development or growth related infrastructure. These are consistent with and adapted from the State’s Plan of Conservation & Development Locational Guide Map. Here are the criteria we used for each and the associated policy:

- **Regional Center** Downtown Torrington: investments in transit, sidewalks, water and sewer infrastructure and downtown development would be consistent with the Regional Plan.

- **Primary Growth Area** These areas have access to public water, sewer, and public transportation. Investments in supporting and/or expanding these services as needed would be consistent with the Regional Plan.

- **Balanced Growth Area** These areas have access to public or community water and/or sewer and may also be located in areas that meet conservation related criteria. Therefore actions in these areas should consider the impact on both natural resources and growth related needs.

- **Village Growth Areas** these areas were determined locally and represent the traditional village centers of our rural towns. In most cases they are not served by public water and/or sewer. Investments in these areas that would be consistent with the Regional Plan include infill housing, sidewalks, bikeways, and “Main Street” improvements. Any action or investment should take into consideration ways to strengthen or improve the traditional village character of these areas.

- **Rural Areas** these areas are appropriate for low density residential use on parcels large enough to accommodate on-site wastewater treatment and wells. Many of these areas also contain water resources, core forests and/or priority farm fields which are conservation priorities.

Regional Recreation-al Trail Map
This map is an appendix to the Plan and shows both current and proposed trails for hiking, walking, and biking in the region. This map can be used to pursue investments in recreational trails that have regional significance in strengthening our existing trail network.

- Priority Farm Fields
- Core Forest
- Waterbody

Notes on Data Layers:
"Core Forest" was determined by The Litchfield Hills Greenprint using the Center for Land-use Education and Research land cover data developed from satellite imagery. Contiguous forest >=200 acres and <=300 feet from developed areas were selected.

"Priority Farm Fields" were determined by The Litchfield Hills Greenprint, based on aerial imagery and USDA soils of prime or statewide importance for farmland and parcels => 50 acres (From Town Assessor data). Parcels that contained at least 10% of farm fields and 25% of USDA designated farmland soils were selected to create the Priority Farm Fields dataset.
Consistency with other plans

State Plan of Conservation & Development

This plan is consistent with the six growth management principles in the State Plan:

- Redevelop and revitalize regional centers and areas with existing or currently planned physical infrastructure.
- Expand housing opportunities and design choices to accommodate a variety of household types and needs.
- Concentrate development around transportation nodes and along major transportation corridors to support the viability of transportation options.
- Conserve and restore the natural environment, cultural and historical resources, and traditional rural lands.
- Protect and ensure the integrity of environmental assets critical to public health.
- Promote integrated planning across all levels of government to address issues on a statewide, regional, and local basis.

Local Plans of Conservation & Development

NHCOC reviewed each of its member municipality’s plan of conservation and development (POCD) and met with each member town’s planning and zoning commission during the development of this Plan. During the draft plan review process, each town was asked to review the draft Plan and comment on its consistency with the local POCD. This process has assured consistency of this Plan with local POCDs.
